

Computing Systems

Competency

Educator designs integrated learning experiences that develop criteria for defining computing systems and analyzing existing computing models.

Key Method

The educator uses the IPO model to design units and assessments to support determining students' understanding of essential vocabulary and key concepts in computing systems.

Method Components

What is Computer Science?

Computer science moves beyond using technology tools toward an understanding of how they work and ultimately designing new solutions to enduring human problems. Despite common misperceptions, computer science is not simply programming. Like any scientific discipline, computer science consists of a body of knowledge that informs how people understand and perceive the world around them, as well as practices for exploration, creation, and experimentation. Programming, defined as giving computers instructions to follow, is a practice used in computer science. The field itself is much broader, much as biology is not simply conducting lab experiments.

Why Should Students Learn Computer Science?

- Over 70% of jobs in STEM are actually computing jobs, and most of the others use computer science as a core part of the job.
- Many future jobs and opportunities will require knowledge and skills in the area of computer science. Therefore, students need multiple opportunities to use computer science to explore and understand the world.
- Even a student who does not end up programming in their job will still need to understand the central principles of how data, networking, the Internet,

- and cybersecurity impact the lives of people in their families and communities.
- Students need to know that when they use a free social media platform, their data can be shared with anyone.
- All of the strands of computer science have drastic impacts on how we live our lives.

Understanding the basic principles of computer science influences how students will interact with the world around them.

Essential Vocabulary

K–2: Students should be *introduced* to these components: (see Resources for specific SOLs)

- Keyboard
- Mouse
- Trackpad
- Desktop computer
- Laptop computer
- Mobile device
- Tablet
- Printer
- Touchscreen
- Hardware
- Software
- Input
- Output

3–7: Students should apply these terms in context: (see Resources for specific SOLs)

- Computing system
- Input
- Output
- Processor
- Storage
- Sensors
- Internet

8: Students should apply these terms in context:

- Motherboard
- CPU
- GPU
- RAM
- NIC

IPO Computer System Model

The **Input-Output (IPO) Model** is a functional graph that identifies the inputs, outputs, and processing tasks required to transform **inputs** into **outputs**. This is a widely used model for analyzing computing systems and designing computer software.

Submission Guidelines & Evaluation Criteria

To earn the micro-credential, you must receive a passing score in Parts 1 and 3 and receive a proficient for all components in Part 2.

Part 1. Overview Questions (Provides Context)

(250-500 words)

Please answer the following contextual questions to help our assessor understand your current situation. Please do not include any information that will make you identifiable to your reviewers.

- 1. Help us understand the context of computer science in your school and classroom. Is there a state or local mandate to include computer science instruction?
- 2. Why did you select to perform the Computing Systems micro-credential, and what is your current level of comfort with incorporating computer science content and instruction into your core curriculum?
- 3. Describe the student population you serve (such as demographics, grade level, location, etc.) and how these students will benefit from your professional development in the Computing Systems micro-credential.
- 4. In the field of computer science, women and minorities are underrepresented. How will you intentionally differentiate instruction to

engage and inspire underrepresented groups through the design of your unit?

Passing: Response provides accurate information that justifies the reason for choosing this micro-credential to address specific needs of both the teacher and the student. Educator includes a learning goal that describes what they hope to gain from earning this micro-credential. Specific details about how you will engage and inspire underrepresented minorities and girls are included.

Part 2. Work Examples/Artifacts/Evidence

To earn this micro-credential, please submit the following **two artifacts** as evidence of your learning. *Please do not include any information that will make you or your students identifiable to your reviewers.*

Artifact 1: Computing Systems Unit

Create two or more computing systems lessons that include all of the following components:

- CSTA Standards and/or State CS Standards addressed
- Learning outcomes
- Description of the lesson
- Computing systems key vocabulary
- How Bloom's Higher-Order Thinking or Computational Thinking skills are included
- How will you intentionally engage and inspire underrepresented minorities and girls/women?
- Description of how CS topic (Computing Systems) will be integrated
- How the learning will be evaluated/assessed

Artifact 2: Culminating Student Activity

Create a culminating activity to determine students' understanding of new computing systems knowledge. Your activity needs to include:

- A student evaluation tool/rubric
- Computer science goals
- Content goals
- A description of the lesson (150–250 words)

Artifact 3: Student work samples

Upload two examples of student work from the activity above. You may choose from the following types of files to upload:

- Image
- Audio and/or video (30 sec-1 min clip)
- Document

Part 2. Rubric

	Proficient	Basic	Developing
Artifact 1: Computing Systems Unit	Unit of two or more lessons that incorporate <u>all of</u> the following elements:	Unit of two or more lessons that incorporate <u>most of</u> the following elements:	Unit of two or more lessons that incorporate <u>a few of</u> the following elements:
	CSTA Standards and/or State CS Standards addressed	CSTA Standards and/or State CS Standards addressed	CSTA Standards and/or State CS Standards addressed Learning outcomes
	Learning outcomes Description of the	Learning outcomes Description of the lesson	Description of the lesson
	lesson Computing systems key	Computing systems key vocabulary	Computing systems key vocabulary How Bloom's
	vocabulary How Bloom's	How Bloom's Higher-Order Thinking or	Higher-Order Thinking or Computational
	Higher-Order Thinking or Computational	Computational Thinking skills are included	Thinking skills are included
	Thinking skills are included	Intentionally differentiated	Intentionally differentiated instruction to
	Intentionally differentiated instruction to engage and inspire	instruction to engage and inspire underrepresented minorities and females	engage and inspire underrepresented minorities and females
	underrepresented minorities and females	Description of how CS topic will be integrated	Description of how CS topic will be integrated
	Description of how CS topic will be integrated	How the learning will be evaluated/assessed	How the learning will be evaluated/ assessed

	How the learning will be evaluated/assessed		
Artifact 2: Culminating Student Activity	Activity includes all of the following: -A student evaluation tool/rubric -Computer science goals -Content goals -A description of the lesson (150–250 words)	Activity includes some of the following: -A student evaluation tool/rubric -Computer science goals -Content goals -A description of the lesson (150–250 words)	Activity is missing most of the following: -A student evaluation tool/rubric -Computer science goals -Content goals -A description of the lesson (150–250 words)
Artifact 3: Student Work Samples	Two examples of student work are uploaded Student work is from the culminating activity The student work shows understanding and application of the learning goals	Two examples of student work are uploaded Student work is not from the culminating activity but may be from another computing systems lesson The student work shows understanding and application of one of the learning goals	One example of student work is uploaded Student work is not from a lesson on computing systems The student work does not show understanding or application of the learning goals

Part 3 Reflection

(250–500 words)

Use the word count as a guide to write a personal reflection about your work on this micro-credential. For tips on writing a good reflection review the following resource:

How Do I Write a Good Personal Reflection?

Please do not include any information that will make you identifiable to your reviewers.

- 1. How did this micro-credential influence how you make connections to the real world through teaching computing systems? What did you find rewarding or enjoyable?
- 2. What other standards might you have integrated with computing systems across the curriculum, and how can you connect your instruction to career readiness moving forward?
- 3. How did you address the needs of girls and underrepresented groups in your classroom, and how did they respond to your choices in the lesson?
- 4. In what ways did students engage with collaboration, communication, critical thinking, creativity, and citizenship through computer science instruction?
- 5. What challenges, if any, did you encounter during this micro-credential process, and how did you overcome them?

Passing: Reflection provides evidence that this activity has had a positive impact on both educator practice and student success. Specific examples are cited directly from personal or work-related experiences to support claims. Also included are specific actionable steps that demonstrate how new learning will be integrated into future practice.
