

# Facilitating Collaborative Relationships

## Competency

Educator deepens their understanding and application of their abilities to facilitate collaborative relationships.

## Key Method

The educator uses the Learn-Design-Do-Reflect cycle to deepen their understanding of strategies for facilitating effective collaborative relationships. They examine their own identity and role as a facilitator. The educator develops their skills through practice and reflection on their relationship to community stakeholders.

## Method Components

Instruction is perhaps one of the most basic building blocks of teacher leadership. Leadership in instructional practice means something more than being the best possible teacher within the four walls of one classroom—it means reaching out and sharing great teaching with others, including fellow educators, but also extending to a broad range of stakeholders. Successful teacher leaders do not keep their effective practices to themselves; they share that knowledge with others in order to benefit all students.

The role of deliberate practice in the acquisition of expert performance. *Psychological Review*, 100(3), 363–406. *Deliberate practice requires feedback to lead to improvement. Cited by Gladwell in Outliers, Ericsson's research has been used to identify the need for feedback from experts or more advanced peers, which has obvious implications for teachers and administrators where feedback is typically limited.*

*In this study commissioned by the Wallace Foundation, researchers from the University of Toronto and University of Minnesota concluded that collective leadership has a stronger influence on student achievement than individual leadership—and higher-performing schools award greater influence to teacher teams, parents, and students. Further, the study found that principals and district leaders do not lose influence as others gain influence.*
