Formative Assessment in the Teaching and Learning Cycle

Educator recognizes assessment as an integral part of the teaching and learning cycle and regularly uses it to plan or revise instruction and to help students set goals for learning.

**Key Method**

The educator creates a link between instructional planning, delivery of instruction, student evidence of learning gathered during instruction, analysis of the evidence, and planning for the next steps in instruction using the evidence. Educator supports students in self-assessing their learning and goal-setting in relation to the learning target.

**Method Components**

**Planning Instruction**

When planning instruction, educators include:

- Content standards that are the focus of an individual lesson or a full unit of study
- Student-friendly learning targets based on the content standards
- Learning activities aligned with the content standards and the learning targets
- Formative assessment processes to gather evidence of whether students achieved proficiency on the content standard
- Educator recognizes that assessment is not a product or event that happens outside of the instructional process and is not solely used for grading.

**Delivering Instruction**

During instruction, educator gathers evidence of student learning through a variety of methods that are seamlessly woven into the learning activities.

**Analyzing Evidence of Learning**

The educator and students engage in a process of analyzing the evidence of learning to determine students' level of proficiency toward mastering the content standard, including uncovering misconceptions.

**Using Evidence to Plan Next Steps and Set Goals**

The educator and students can use the learning target, the evidence from formative assessment processes, and proficiency criteria to set goals for the next steps in learning.

Analyzing Student Work
Submission Guidelines & Evaluation Criteria

To earn the micro-credential you must receive a passing score in Parts 1 and 3 and receive a proficient rating for all components in Part 2.

Part 1. Overview Questions

250-word limit

Please answer the following contextual questions to provide understanding of your current situation. Please do not include any information that will make you identifiable to your reviewers.

Describe your classroom demographics and instructional content goals to provide the assessor an understanding of your classroom dynamics. Include information such as grade level, number of students, content area (if applicable), and special circumstances. Do not include personally identifiable information such as school name or student names.

- **Passing**: Response provides the assessor a clear and concrete understanding of the classroom context of the educator and the specific instructional goals of the educator as it relates to the grade level, academic capabilities, and specific content area being taught.

250-word limit

Please answer the following contextual questions to provide understanding of your current situation. Please do not include any information that will make you identifiable to your reviewers.

In your own words, define formative assessment and the role it plays in teaching and learning. Include how formative assessment is different from summative assessment.

- **Passing**: Response shows a clear understanding of formative assessment’s role in planning for and adjusting instruction, including how to use the results of the assessment process with students.

Part 2. Work Examples / Artifacts

To earn this micro-credential, please submit the following four artifacts as evidence of your learning. Please do not include any information that will make you or your students identifiable to your reviewers.

**Artifact 1: Lesson Plan**

Create a plan for a lesson you will teach that includes the content standard, learning targets, learning activities, and formative assessment processes.

**Artifact 2: Student Artifact**

Submit one student work sample that shows the information gathered about student mastery of the content standard based on the formative assessment process. This could include the following (for ideas, see the Evidence Gathering Routines resource):

- Entrance or exit slip
- A short (five-minute) video of a classroom discussion
- Formative quiz or formative short written response
- Some other formative assessment process used to elicit accurate information about student understanding
Artifact 3: Analysis of Student Evidence

- Analyze the formative assessment from the above lesson.
- This may be completed by the educator or the students or both.
- The analysis should clearly show the extent to which students are meeting the proficiency expectations of the content standard.

Artifact 4: Lesson Plan Based on Analysis

Write a lesson plan for the next learning activity that uses the analysis of the formative assessment process to support students not yet meeting the proficiency standard, addresses simple misconceptions, and/or extends and deepens the learning for students already at mastery. The plan should clearly relate to the analysis of student evidence.

and does not incorporate elements of the analysis of student evidence to plan for the next steps in learning, or the incorporation of such evidence is not clear.

Reflection

1. How did this process deepen your understanding of the assessment cycle?
2. What impact did your plan have on student learning? Include specific examples.
3. How has this project impacted your teaching? What will you do differently as you plan for future lessons?

Please answer the following reflective questions in a reflection essay of no more than 500 words. Please do not include any information that will make you identifiable to your reviewers.

- **Passing:** Reflections answer all of the questions and cite specific examples from the planning and teaching of your lesson(s).
