Trauma-Informed Pedagogy

Educator demonstrates an understanding of how trauma can affect student behaviors and responses within the school context and promotes students’ abilities to self-monitor and maintain positive engagement in all aspects of learning and interactions.

**Key Method**

The educator will understand student behaviors from a trauma-informed lens and respond in a way that will help their students self-monitor and maintain positive engagement in all aspects of learning and interactions with others.

**Method Components**

**What Is Child Trauma?**

Child trauma is recognized as a significant event or events, either witnessed or directly engaged in, that has a lasting effect on a student’s ability to create and maintain positive engagement in all aspects of learning and interaction.

**How Does Trauma Affect the Brain?**

Educators recognize that a brain develops in a basic to advanced pattern, with life-sustaining processes occurring first and more complex metacognitive abilities occurring last. Incidental, one-time trauma as well as ongoing traumatic events can affect later functioning. The degree of trauma, the frequency of the trauma, the nature of the trauma, and complex environmental factors prior to, during, and after the trauma can play an important role in the manifestation of behaviors in the learning context.

**Trauma-Informed Pedagogy**

Educators who work from a trauma-informed perspective recognize and utilize a basic understanding of brain development. This is used to ensure that the intentional support strategies being utilized are directly related to the area of the brain that is affected and target the creation of new pathways of understanding and learning.

**Leveled Intervention Strategies**

Leveled intervention strategies, often called tiers or tiers of support, are recognized approaches to student management that allow an educator to provide differentiated support to meet student needs. Each of the three main levels should include multiple strategies:

- **Level 1:** This level is utilized by all students, with the goal of keeping students engaged in the learning environment. Examples could include Whole Group "Brain Breaks" or "Body Breaks."

- **Level 2:** This level is utilized by a select group of learners and is seen as additive to Level 1 intervention strategies. Examples could include additional "Brain Breaks" or self-monitoring notebooks

- **Level 3:** This level is utilized by individual learners and is seen as additive to Levels 1 and 2. Specific targeted examples of interventions are necessary at this level, but could include individualized passes to go to pre-arranged safety spots within the school or individualized behavior plans.

**Behavior Support Plan**

A behavior support plan begins with the creation of relationships with learners, supporting the educator in developing a skill set that allows them to begin to predict factors that may cause a student to be in crisis. The educator then works to limit the exposure and, ultimately, create intentional strategies of support. Over time, this intentional strategic practice supports the learners in creating new abilities and skillsets that reduce behaviors that interfere with and/or limit their ability to access the school environment. This plan is understood to be flexible and recursive, as students adopt new skillsets.

**Self-Monitoring**

Self-monitoring occurs when students understand that they can take ownership of their behavior within the learning process. This understanding supports the development of the steps necessary to maintain positive engagement in all aspects of learning and interaction.

**Replacement Behaviors**

Replacement behaviors are behaviors that encourage the ceasing of a behavior that limits a student’s access to learning opportunities and encourages maintenance in the learning opportunity. Educators recognize that we cannot "stop" a student’s behavior, but we can support a replacement. Examples could include the transition of loud pencil tapping on a desk to wrapping the pencil in a rubber band to silence the tap and allowing the student to continue the activity.

**Teaching Students to Self-Advocate**

Students are taught to self-advocate through the recursive work of the informal behavior plan. As students learn strategies to lessen their dependency on the educator and begin to understand their responses to situations, educators can begin to minimize their control over the students’ behaviors that impede their access to learning opportunities.

Submission Guidelines & Evaluation Criteria

To earn the micro-credential, you must receive a “Passing” evaluation for Parts 1 and 3 and “Proficient” for each component in Part 2.

Trauma is recognized as a significant event or events, either witnessed or directly engaged in, that has a lasting impact on a student’s ability to create and maintain positive engagement in all aspects of learning and interaction.

Choose either Option A or Option B

**Part 1. Overview Questions**

1. 200 word limit
2. 500 word limit

Option A: (For educators who want to explore an existing student with trauma)

1. What background information is important to know to understand the trauma that is affecting your student? Include grade level, subject area, any relevant cultural information, and special considerations regarding student characteristics. Be mindful not to reveal anything confidential about a student.

2. Self-assessment
   Answer each of the following questions
   1. What were some contributing factors to the student’s trauma?
   2. How have the student’s responses/behaviors served him/her?
   3. What leveled strategy(ies) have been implemented to support this learner?
   4. Why did you choose these strategies?
   5. What replacement behaviors have you implemented?
   6. How have you involved the student in the targeted approach?
   7. If given the chance, what might you do differently?

**Passing:** Educator completes Questions 1 and 2 for either Option A or B. Answers should include specific examples that relate to current classroom practices and understandings.

1. 200 word limit
2. 500 word limit

Option B: (For educators who want to explore the effects of trauma more generally)
1. Describe your current philosophy when addressing students who have experienced trauma. How do you/would you support these students? Tell how/why you picked those strategies and how they are aligned with the behaviors being exhibited. Be mindful not to reveal anything confidential about a student.

2 Self-assessment
Imagine that you are a teacher in your current grade level. A new student has been enrolled in your class. You learn that the student is currently in foster care after recently being removed from his home. The student has been diagnosed with post-traumatic stress disorder (PTSD) and attention deficit/hyperactivity disorder (ADHD). When he arrives and you ask him to take his seat, he erupts in a series of expletives before sitting at a different desk than the one you had indicated.

1. What is your initial response?
2. What strategy(ies) do you set in motion?
3. Why do you choose these responses?
4. How do these response(s) affect the students in the area?
5. What do you do and say once the current situation is safe?
6. How do these response(s) affect the students in the area?
7. What plan will you implement for the future?
   - **Passing:** Educator completes Questions 1 and 2 for either Option A or B. Answers should include specific examples that relate to current classroom practices and understandings.

Part 2. Work Examples / Artifacts
For our purposes, trauma is recognized as a significant event or events, either witnessed or directly engaged in, that has a lasting impact on a student's ability to create and maintain positive engagement in all aspects of learning and interaction.

1. **Behavior Support Plan**
Create an action plan that addresses increasing the student’s ability to self-monitor and maintain positive engagement in all aspects of learning and interactions. The action plan should include:
   - The specific behavior needing to be addressed
   - An initial goal for improvement and how that improvement will be measured
   - Possible causes or underlying factors that are increasing the frequency, duration, and intensity of the behaviors that are limiting the student’s ability to access the learning environment
   - The steps required
   - A timeline
   - The personnel involved and their individual roles (including the student)
   - The external support networks needed

Explain how these components will help the student meet the goal.

2. **Project**
Create a pamphlet or brochure for your school colleagues that includes the following:
   - A summary of how child trauma can affect child development (including typical behaviors and rationale regarding how and why those behaviors may have emerged)
   - A list of school, district, and community resources that are available to assist students who have faced traumatic situations
   - Leveled strategy ideas (2-3 at each level) to support each tiered approach to students who have experienced traumatic events

<table>

**Reflection**

500 word limit

Review your self-assessment and answer the following questions.

1. Would you change any of your responses now that you have completed part 2 of this micro-credential? Please explain.
2. How has working on this micro-credential changed your instructional practice? Give a few specific examples.

- **Passing:** Response includes evidence of learning and gives specific examples of how working on this micro-credential has impacted classroom practice.
